

**SPECIAL DELIVERY FOR EXTREME CRIBS:
The XFX GeForce® 9600 GT is a Natural Born Performer**

Hong Kong, February 22, 2008 – The XFX GeForce® 9600 GT is a true wonder child, derived from next-generation GeForce graphics with PureVideo® HD technology enabling HD DVD and Blu-ray video playback with brilliant clarity. Best of all, this baby is impressively affordable.

The first born in the highly anticipated 9-series, the XFX GeForce 9600 GT pushes the gaming experience to new heights with up to 90 percent greater performance than any GeForce card in its class. This prodigal child gives a huge value for its price. The immersive entertainment experience is the powerful product of full Microsoft® DirectX® 10 support, NVIDIA®'s Quantum Effects™ technology, Lumenex™ engine as well as Unified Architecture, ensuring that this amazing new card can play the hottest games with jaw-dropping speed.

Its standard heart runs a core speed of 650 MHz, with XFX overclocked versions available in the Extreme and XXX editions pushing 680 MHz and 700 MHz. On top of its impressive speeds, the 9600 GT is HDMI capable with the use of HDMI certified components. The 9600 GT XXX edition is fully HDMI certified and includes an HDMI component kit and Company of Heroes as a bonus game bundle.

NVIDIA SLI® Technology enables users to pair this little killer with an identical 9600-based card for up to two times the performance of a single-card set-up. Create a mother and child reunion by pairing it with an XFX nForce® motherboard to create the ultimate graphics platform.

Compatible with PCI Express and the new PCI Express 2.0 bus architecture, the Geforce 9600 GT graphics card was born to take on today's—and tomorrow's—most bandwidth-hungry games and 3D applications. It even ensures top-notch capability and performance for OpenGL applications. Experience the most realistic game effects in today's hot titles, such as *Crysis*, *Call of Duty 4: Modern Warfare*, *Unreal Tournament 3* and *Assassin's Creed*.

But this card is just as admirable outside the gaming arena. Users also enjoy a premium 3D user experience with Windows Vista and Windows Media Center. And, by offloading the CPU, the GeForce 9600 GT enables users to work on other tasks, such as sharing, editing and managing photos and videos. NVIDIA PureVideo HD technology ensures superb picture quality and ultra-smooth movies with 100% offload of H.264 video decoding from the CPU and significantly reduced power consumption. Dual duallink DVI support enables the 9600 GT to drive the industry's largest and highest resolution flat-panel displays up to 2560x1600, and also supports High-bandwidth Digital Content Protection (HDCP). To learn more about the XFX GeForce® 9600 GT graphics card, or to locate a participating e-tailer, go to www.xfxforce.com.
